

Tobías Rivas

Full Stack Developer

Mendoza, Argentina · tobiasbrivas@gmail.com · github.com/Boit-6 · linkedin.com/in/tobias-rivas-1220b7283

PROFILE

University Programming Technician (UTN) with experience in full stack web development with TypeScript, React, Next.js, NestJS and PostgreSQL, and in process automation with n8n. I built an end-to-end platform with payments, row-level security in the database, automated tests and CI. I come from hardware technical support, with four years of dealing directly with clients.

EXPERIENCE

Full Stack Developer · Temotiva (collaborator) Apr 2026 – Oct 2026

- Full stack development with React, NestJS and Tailwind CSS.
- Complete redesign of the site's B2B section.
- Responsible for the site's SEO.
- Fixed bugs in the back-end.

Electronics Technician and IT Support · Independent Technical Service (freelance) 2022 – Present

- Diagnosis and repair of desktop PCs and laptops at component and board level; about 2 devices per week.
- End-to-end client service: quote, repair, delivery and final testing.
- Installation of security cameras, operating systems (Windows and Linux) and home and small-office networks.

Technician · La Consola Digital, Mendoza 2022

- Assembly, configuration and repair of computer equipment; around 2 devices per day.

PROJECTS

CRM for freelancers · github.com/Boit-6/crm-freelancers-n8n · [demo](#)

Next.js 16 · React 19 · TypeScript · n8n · Supabase (PostgreSQL, RLS, Realtime) · Stripe Connect · Docker

- Platform that takes a request from inquiry to payment with no manual tasks: request qualification, proposal accepted online, PDF invoice and a real-time dashboard.
- Stripe Connect payments protected by milestones: held funds, automatic release after 7 days, disputes, and idempotent payments with signature verification.
- n8n automation with 21 webhooks, 9 scheduled processes and 314 nodes; data access isolated per workspace with RLS.
- 291 RLS test cases, 240 front-end tests with Vitest and Testing Library, and CI with lint, type checks, build and secret scanning.
- Started as the final project of my degree, built in a team of two; I then extended it on my own into a multi-developer platform with a project board, messaging and reputation.

El Hornero · Website in production for an event venue · [view site](#)

Next.js · TypeScript · React Hook Form · Zod · Server Actions

- Multi-step form to plan an event, date availability check, server-generated PDF summary sent over WhatsApp, and a dashboard for the venue to manage inquiries.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS

Front-end: React, Next.js, Tailwind CSS

Back-end and data: Node.js, NestJS, PostgreSQL, Supabase, MySQL, MongoDB

Tools and other: Git, GitHub Actions, Docker, n8n, Stripe, Vitest, SEO, Linux
